

**PROCESS EQUIPMENT  
& CONTROLS**

**Controls &  
Robotic Automation**

## You know the problem

Reliable production and warehouse workers are hard to find, and getting qualified people for hazardous or demanding positions is even more challenging and expensive.

**We have a smart solution**  
for every dirty,  
difficult, tedious, or  
dangerous job.

PEC makes it possible for operations of any size to reduce labor costs and workplace injuries, while increasing productivity. We help businesses like yours realize the full potential of robotic process automation.

# We do more

As experienced industrial process system integrators and service providers, we know how to integrate advanced robotics and machine control systems into any existing processes. We design an efficient robotic system to meet every requirement and provide comprehensive support to keep your operation running.

A responsive local partner with the resources and capabilities of a world-class robotics company.

## NEW SYSTEMS

Why can we be sure your new system will deliver all the performance you expect? Because PEC takes the time upfront to define business goals and predict challenges before we design, build, and install any new robotic system. Our engineers and project managers work with your team to develop a detailed plan, select the right equipment, and integrate new technologies to achieve maximum efficiency.

## UPGRADES

Modern robotic automation systems offer unlimited upgrade flexibility with advancing technology. PEC can analyze your system and make strategic upgrades or retrofits to equipment and software that delivers great ROI through increased process efficiency, plus improve quality and reliability.

PEC is a FANUC certified service provider, offering the dependability of a local team, backed by a recognized leader in automation technology for manufacturing.

## THE PEC-PLUS

- Custom robotic solutions
- Comprehensive integration plans
- Training for production and maintenance teams
- Electrical and mechanical troubleshooting
- Automation control and equipment debugging

**Expertise, versatility, and an unyielding  
commitment to your success.**
